ABSTRACTED-PUB-NO: WO 9946361A  
BASIC-ABSTRACT:

NOVELTY - A site-specific denaturation reaction of a membrane or its piercing is performed after contacting a part of all of the membrane with a drug containing a specific compound that can react with a specific stimulus to induce membrane destruction.

DETAILED DESCRIPTION - A site-specific denaturation reaction of a membrane or its piercing is performed after contacting a part of all of the membrane with a drug containing a specific compound that can react with a specific stimulus to induce membrane destruction.

INDEPENDENT CLAIMS are also included for the following:

(i) a site-specific denaturation or pierced membrane or a membrane structure containing the membrane obtained by the above method;

(ii) an method for injection of a compound by mixing a complex made from a drug containing the target compound and carrier together with the above structure by which the compound is introduced into such structure; and

(iii) a membrane destruction membrane for site-specific denaturation or piercing composed of a support member with at least a part of the surface formed with a membrane denaturation reaction-promoting site having a membrane-denaturation force other than physical shear force.

USE - The technique can be used to pierce cell membranes with ultrafine member

## Record List Display

Page 3 of 3

constituting microinjectors, micromanipulators or microelectrodes which are hardly applicable in piercing cell membranes by prior-art methods. Such technique is particularly useful in gene therapy by transferring genes into cells, in bioengineering by introducing or removing materials from the cells such as nucleic acids and proteins including foreign substances as applied in cloning animals.

ADVANTAGE - The piercing is site specific without resort to any physical shear force, not achievable by prior-art techniques.

DESCRIPTION OF DRAWING(S) - Diagram showing the relationship of a support member with a cylindrical membrane destruction membrane and a membrane structure receiving treatment.

Membrane structure 1

support member 2

membrane denaturation reaction-promoting portion 3

denatured portion of the membrane 4
